

```
let add/2 { |a b|  
  a + b  
}  
add 1 2
```

A diagram illustrating the mapping between a `let` expression and a function call. A green line connects the lambda body `a + b` to the function definition `_Cs3add2E`. A blue line connects the lambda arguments `|a b|` to the arguments `arg a` and `arg b` in the `_Co1p2E` call. A red line connects the function call `add 1 2` to the `call _Cs3add2E` line.

```
decl _Cs3add2E( a b )  
decl _Co1p2E( arg@0 arg@1 )  
decl _C@main( )  
defn _C@main( ) {  
  call _Cs3add2E( 1 2 )  
}  
defn _Cs3add2E( a b ) {  
  call _Co1p2E( arg a arg b )  
}
```
